

Advanced Configuration Manager Current Branch Training

Trainings-ID: SCCM595

[Zum Seminar →](#)

Das nehmen Sie mit

This 4-day course is designed for the experienced Configuration Manager administrator. During this course you will learn advanced features and the latest features that you can implement in Labs.

We will walk you through the constant changes in Configuration Manager and show you how the product has evolved from slow moving software to a true real-time enterprise management system. We'll also dive deep into the many Cloud Connect scenarios and explain exactly how and where they fit into your environment.

The world of enterprise client management is not black or white, it's about "being better together" and choosing what makes the most sense for your business from each management option. Of course, the entire course will include troubleshooting best practices for Configuration Manager key features based on the latest Windows Server Edition and Windows endpoints. After the course, you will have a solid understanding of design options, cloud connectivity options, major feature flow, and troubleshooting techniques.

What you'll learn:

You will be able to design, deploy, manage, and troubleshoot Configuration Manager in your environment. The course is always based on the latest Current Branch available. You will gain a solid understanding of the following design options, the flow of key functions, and troubleshooting techniques:

- Fault tolerance and High availability

- Troubleshooting tools
- Installing and troubleshooting client deployment
- Inventory Management
- Reporting & Queries
- Application deployment
- Software updates
- Endpoint Protection
- Compliance management
- Operating System Deployment

Material:

Student Lab Manual and Sample scripts
